

SANN-24

Saco Controls Advanced Annunciator Panel

Optimize Your Industrial Operations with the Advanced SANN-24 Annunciator System

Enhance the safety and efficiency of your operations with the SANN-24 alarm status indicator panel. Whether in industrial process control systems, fire detection, or power network dispatching, this panel offers unmatched reliability and flexibility.

The Alarm Status Indicator Panel (SANN-24) by **SACO Controls Inc.** is a modular, solid-state annunciator designed for high-reliability applications. The System Features a flexible, mosaic construction, that allows the individual tiles to be customized for enhanced process visibility and alarm status tracking. Future modifications can be easily made by simply removing and replacing tiles without disrupting the system.

Why Choose the SANN-24 Alarm Panel?

Modular Design:

Easily configure your panel with customizable alarm windows using backlit mosaic tiles. It's adaptable to your needs and allows for quick modifications without disrupting the system.

Exceptional Visibility:

Polycarbonate tiles illuminated by LEDs in various colors (red, green, white, blue, yellow, amber) ensure clear visibility, even in challenging conditions.

Long-Term Reliability:

LEDs are designed to last up to 100,000 hours, ensuring minimal maintenance and maximum efficiency.

Applications:

- Industrial process control systems
- Power network dispatching
- HVAC (Heating, Ventilation, Air Conditioning) systems
- Power plants and water treatment facilities
- Fire detection systems

Technical Features:

- Power Supply: 24V DC \pm 10%
- Operating Temperature: 5°C to 40°C
- Easy Mounting: Compatible with standard mounting brackets and a 26-pin ribbon cable for simple connections.
